Contents (from markdown SSOT)

- VOICE_CLONE.md

Source: VOICE_CLONE.md

Service: F:/Github/voice-clone-service

ME Manager UI: <https://me.willworkforlunch.com/voice-clone>

Video Studio already defaults TTS to jon-voice-clone with espeak-ng soft-fallback (src/lib/video.ts, src/lib/voice-clone.ts).

Cursor / agent (done or ready)

- 1 Engines present: engines/chatterbox.py, engines/gpt_sovits.py
- 2 Keep espeak-ng fallback in ME Manager (already wired)
- 3 Catalog provider jon-voice-clone as Free (already in provider tests)
- 4 Document train command CONFIRM below

Install Chatterbox on GPU host (operator)

```
cd F:\Github\voice-clone-service .\venv\Scripts\pip.exe install chatterbox-tts
.\scripts\start.ps1
```

Without Chatterbox, synthesizer returns placeholder WAV (dev OK).

CONFIRM — GPT_SOVITS_TRAIN_CMD

Set on the voice-clone host .env to the real GPT-SoVITS fine-tune invocation once the SoVITS tree path is known, for example:

```
GPT_SOVITS_TRAIN_CMD=python path\to\GPT-SoVITS\train.py --exp jon-v1 ...
GPT_SOVITS_API_URL=http://127.0.0.1:9880 VOICE_CLONE_URL=http://<gpu-host>:8xxx
VOICE_CLONE_API_KEY=<shared fleet key>
```

Until set, POST /train writes a **simulated** READY marker — do not treat as a real model.

Jon-only

- 1 Record **45–90 minutes** of clean speech
- 2 Upload via ME Manager /voice-clone (or /dataset/upload)
- 3 Start train when dataset status shows enough minutes
- 4 Verify Video Studio narration uses jon-v1 without falling back

Acceptance

- 1 /health reports Chatterbox and/or jon-v1 ready
- 1 Video Studio job with voiceProvider: jon-voice-clone produces non-placeholder audio when service is up
